Homework 5 Reflection

This homework was awesome. It wasn't too much work and gave me insight into the actually used software of roboticists. I do wish there were more resources and direction given in the assignment however. I learned many things, like how SLAM toolbox can provide the /map and transform from map to odom. I learned that if you don't have SLAM producing these (like after creating the map), you have to substitute them in yourself. I also learned that nav2_bringup starts your localization for you, while navigation_launch does not. I also really enjoyed starting to work with gazebo. From what I've read, stage isn't commonly used, so using a real simulator like gazebo was great. I hope I can continue working on this assignment in the future.
